Statement of Work

Project Martha — CRM Platform Implementation

Prepared for Craggs Energy and Moorland Fuels

CC-CE-MARTHA-2026 · Private & Confidential

1. Executive Summary

Craggs Energy and Moorland Fuels have launched Project Ignite, a strategic transformation programme to modernise customer engagement, operational efficiency and business intelligence across the organisation. Project Martha, a foundational workstream within Project Ignite, will deliver a next-generation Customer Relationship Management (CRM) platform that becomes the single source of truth for all customer interactions — sales, service, marketing and account management — while integrating seamlessly with the existing CODAS operational system, which continues to manage order processing, delivery, invoicing and finance.

Current Business Challenges

- Fragmented customer information spread across multiple systems, with no complete view of the relationship.
- Reactive engagement driven by manual follow-up, leading to missed opportunities and inconsistent service.
- Limited intelligence on high-value, at-risk or cross-sell customers.
- Heavy reliance on manual processes for qualification, follow-up, quoting, data entry and reporting.
- No unified customer engagement layer sitting alongside CODAS, which remains the operational system of record.

Vision & Business Objectives

Project Martha will establish a modern, scalable, enterprise-grade CRM that becomes the digital foundation for all customer-facing operations, supporting the complete lifecycle from initial enquiry through long-term account management. Specifically, the platform will:

- Establish a single customer view across every department.
- Improve lead qualification and sales conversion through structured lifecycle management.
- Increase retention by proactively identifying customers at risk of lapsing.
- Reduce manual administration through workflow automation.
- Improve data quality through configurable custom fields and validation.
- Integrate seamlessly with CODAS and deliver real-time business intelligence to management.

Expected Business Outcomes

Area	Key Benefits
Sales	Improved lead conversion, pipeline visibility and faster opportunity identification.
Customer Service	Complete interaction history, faster resolution, fewer missed deliveries.
Marketing	Better segmentation, behaviour-driven campaigns, clearer ROI measurement.
Finance	Visibility of customer financial status, credit management, CODAS integration.
Operations	Better coordination with CRM and more accurate delivery information.
Executive Management	Real-time dashboards, revenue forecasting and retention analytics.

Proposed Solution

Communication Crafts proposes a bespoke enterprise CRM built from ten integrated business modules: Core CRM & Customer 360; Lead & Prospect Management; Customer Financial Management; Product, Pricing & Commercial Management; Customer Service & Complaints; Marketing & Campaign Management; Workflow Automation; Reporting & Dashboards; System Administration; and Integration Management. The platform will be delivered using a modular, phased implementation approach, with each module

independently testable while sharing common services such as identity, security, notifications and reporting.

2. Business Objectives

Project Martha will consolidate customer information, sales activity, service interactions, marketing engagement and account management into a single platform, while CODAS remains responsible for order processing, delivery, finance and invoicing. This supports Project Ignite's wider goal of a connected, data-driven operating model across the business.

Strategic Objectives

Objective	Summary
Single Customer View	Unified Customer 360 profile available to every authorised department.
Improve Sales Effectiveness	Structured lifecycle management from lead through to forecasting.
Increase Customer Retention	Proactive identification of at-risk and lapsed customers via buying-pattern and reorder analysis.
Improve Customer Experience	Complete history, faster response and personalised communication.
Reduce Manual Administration	Automated lead creation, task assignment, reporting and notifications.
Improve Data Quality	Duplicate detection, validation rules and configurable custom fields.
Deliver Actionable BI	Real-time dashboards and reporting across every department.
Enable Intelligent Segmentation	Targeting by customer type, consumption, geography and margin.
Integrate Business Systems	CODAS, phone, email, website, marketing and credit-application integration.
Build a Future-Ready Platform	Modular architecture supporting self-service, mobile, AI and IoT in later phases.

Business Success Criteria

Objective	Expected Outcome
Customer Visibility	Single customer view across all departments.
Sales Efficiency	Improved lead conversion and pipeline visibility.
Customer Retention	Reduced churn through proactive engagement.
Operational Efficiency	Reduced manual administration via automation.
Data Quality	Improved accuracy and completeness of customer information.
Customer Experience	Faster response times and personalised service.
Reporting	Real-time dashboards and actionable business intelligence.
Integration	Seamless CRM and CODAS synchronisation.
Scalability	Configurable platform supporting future business growth.
Governance	Secure, auditable, role-based access to customer information.

Project Martha is a foundational workstream within Project Ignite: by delivering a unified CRM integrated with CODAS, it establishes the technological and operational foundation for future digital initiatives while addressing the CRM and customer-experience requirements defined in the client specification.

3. Project Scope

Project Martha covers the design, development, integration, testing, deployment and post-go-live support of a bespoke CRM platform. It becomes the organisation's primary customer engagement system for Sales, Customer Service, Marketing, Finance and Management, while CODAS remains the operational system of record for fulfilment, dispatch, invoicing and stock.

In-Scope Modules

Module	Summary
01 · Core CRM & Customer 360	Central customer repository, hierarchy, sites/tanks, custom fields, timeline.
02 · Lifecycle & Lead/Prospect Management	Lead-to-active-customer journey with automated qualification and follow-up.
03 · Customer Financial Management	CODAS-synchronised financial visibility and digital credit applications.
04 · Product, Pricing & Commercial Management	Pricing matrix, spot-quote calculator, quote approval workflow.
05 · Customer Service & Complaints	Case management, SLAs, escalation and delivery visibility.
06 · Marketing & Campaign Management	Segmentation, campaigns, consent management, retention triggers.
07 · Workflow Automation Engine	Configurable triggers, tasks, reminders and approval workflows.
08 · Reporting & Dashboards	Role-based dashboards, standard reports, custom report builder.
09 · System Administration	Users, roles, custom fields, lookups and workflow configuration.
10 · Integration Management	CODAS synchronisation, APIs, email/calendar/document integration.

Cross-functional capabilities shared across every module include: customer timeline, global search and filters, document attachments, audit logging, notifications, role-based access control and the integration framework.

Future-Phase / Out-of-Scope Items

Consistent with the client specification, the following are treated as future phases and excluded from the current engagement:

- Logistics planning cockpit, fleet telematics and driver mobile application.
- Electronic Proof of Delivery (ePOD) and online ordering.
- Customer self-service portal and enhancements to CODAS itself.
- Tank sensor hardware provision and third-party licence procurement.

4. Business Process Overview

Project Martha orchestrates the end-to-end customer lifecycle across Sales, Customer Service, Marketing, Finance and Operations, while CODAS remains the operational system of record. The end-to-end flow is:

Lead Captured → Qualification → Prospect Development → Quotation → Credit Approval → Customer Activation → Order Placement → CODAS Processing → Delivery → Customer Service → Retention → Repeat Orders → At-Risk Detection → Win-Back Campaign

Stage	Purpose
Lead Capture	Capture enquiries from web, social, phone, referral and campaigns; deduplicate and assign an owner.
Qualification	Assess requirements, consumption and buying window using configurable criteria.
Quotation	Generate pricing via the pricing engine, apply margin rules and route for approval where required.
Customer Activation	Digital credit application, terms acceptance and CODAS account creation.
Order Management	CRM captures and validates orders; CODAS performs fulfilment and delivery.
Customer Service	Every interaction — complaint, request or query — is logged, assigned, resolved and audited.
Retention	Automated monitoring of order patterns triggers tasks, calls and marketing activity for at-risk customers.
Marketing	Segmented, consent-driven campaigns feed the Customer 360 timeline.
Financial Visibility	Credit status, balances and invoices are synchronised from CODAS for informed decisions.
Reporting & Admin	Continuous BI for management; no-code configuration for administrators.

5. Functional Modules

Module 01 — Core CRM & Single Customer View

Establishes a centralised customer repository with a role-based Customer 360 workspace, supporting parent/child hierarchies, multi-site and multi-tank structures, and complete integration with CODAS.

Key Capabilities

- Customer master management: create, edit, view, archive, merge and restore.
- Parent/child account hierarchy with roll-up reporting.
- Customer 360 workspace: profile, contacts, financial summary, sales summary and a unified interaction timeline.
- Site and tank management, including vehicle-accessibility indicators for delivery planning.
- Configurable custom field framework (16 field types) with validation, mandatory rules and reporting.
- Duplicate detection and merge, plus nearby-customer proximity search for route planning.
- Role-based security and full audit logging.

Acceptance Criteria

- Parent/child hierarchies roll up correctly and duplicates are flagged before creation.
- Customer 360 unifies profile, communications, finance, site and operational history.
- Custom fields are configurable, searchable and reportable without code changes.
- Account closure requires a reason and is fully auditable.

Module 02 — Customer Lifecycle & Lead/Prospect Management

Manages the full acquisition-to-retention journey across seven configurable lifecycle stages — Lead, Qualified, Warm, Hot Prospect, Active, At-Risk and Lapsed — combining lead capture, qualification, opportunity tracking and automated follow-up.

Key Capabilities

- Multi-channel lead capture (web, social, email, phone, referral, campaign) with automatic source attribution.
- Progressive profiling that enriches customer data as the lifecycle advances.
- Configurable qualification criteria by customer segment.
- Opportunity management with value, margin, probability and forecast tracking.
- Automated follow-up (24-hour, 48-hour and buying-window reminders) and task generation.
- Customer intelligence scoring: value, opportunity, retention and priority.
- Lost-opportunity capture with reason and competitor tracking for future campaigns.

Acceptance Criteria

- Records progress through the seven stages with mandatory information enforced at each.
- Automated follow-ups fire at configured intervals; At-Risk/Lapsed detection is automatic.
- Pipeline, conversion and lifecycle reports reflect accurate, real-time status.

Module 03 — Customer Financial Management & CODAS Financial Integration

Provides real-time visibility of CODAS financial data — credit, balances, invoices and direct debit — within Customer 360, plus a digital credit-application workflow, without duplicating CODAS as the system of record.

Key Capabilities

- Financial summary panel: credit status/limit, outstanding and overdue balances, payment terms, direct debit status.

- Read-only invoice history with search and filtering.
- Overdue and due-soon monitoring with visual alerts.
- Digital credit application: document upload, finance review, approval and account activation.
- Purchase order tracking and compliance fields (VAT, company registration, RDCO).
- Scheduled and on-demand CODAS synchronisation with logging and reconciliation.

Acceptance Criteria

- Financial summaries accurately mirror synchronised CODAS data.
- Credit applications support document upload, approval and a full audit trail.
- Synchronisation logs expose successful and failed events; financial data remains read-only unless designated otherwise.

Module 04 — Product, Pricing & Commercial Management

Delivers a governed commercial pricing capability — product catalogue, configurable pricing matrix, spot-quote calculator and approval workflow — protecting margin while speeding up quotation turnaround.

Key Capabilities

- Configurable product catalogue with commercial attributes (cost, margin, seasonal pricing).
- Pricing matrix by customer type, segment, region, volume and product.
- Customer-specific, contract and promotional pricing overrides.
- Spot Quote Calculator applying margin, tax and distance adjustments.
- Quote lifecycle (draft → sent → won/lost) with expiry and version history.
- Threshold-based approval workflow escalating from Sales Manager to Commercial Manager.
- Automated weekly price emails and market-movement alerts.

Acceptance Criteria

- Spot quotes apply correct pricing and margin rules; approvals trigger at configured thresholds.
- Customer-specific pricing overrides standard pricing correctly.
- Pricing, quote and win/loss reporting is accurate and auditable.

Module 05 — Customer Service, Case Management & Complaint Resolution

Centralises every post-sales interaction — cases, complaints, service requests and delivery queries — into a single, SLA-driven workflow feeding the Customer 360 timeline.

Key Capabilities

- Case and complaint management with configurable categories and priorities.
- Structured workflow: create → assign → investigate → resolve → confirm → close.
- SLA targets by priority with automatic escalation on breach.
- Delivery and site-access information synchronised from CODAS, including vehicle accessibility.
- Customer satisfaction and NPS surveys linked to case closure.
- Full communication history (calls, AI call summaries, email, notes) recorded on the timeline.

Acceptance Criteria

- Cases are created, assigned, tracked and resolved through configurable workflows with SLA compliance.
- Escalations trigger automatically; all communications land on the Customer 360 timeline.
- Service and complaint reporting reflects accurate operational data.

Module 06 — Marketing, Customer Segmentation & Campaign Management

Turns customer, behavioural and lifecycle data into a dynamic segmentation and campaign engine, with every marketing touch feeding back into the Customer 360 timeline.

Key Capabilities

- Dynamic, reusable segments based on profile, commercial, behavioural, operational and consent criteria.
- Campaign planning, approval and execution (email, retention, cross-sell, win-back and more).
- Automated retention and win-back triggers based on inactivity or declining volume.
- Cross-sell and upsell opportunities surfaced on Customer 360 and Sales dashboards.
- Channel-level marketing consent management with full audit trail, enforced at send time.
- Campaign performance tracking: delivery, open/click, conversion and ROI.

Acceptance Criteria

- Segments update dynamically; campaigns respect consent and communication preferences.
- Retention and win-back campaigns trigger automatically per configured rules.
- Campaign ROI and engagement reporting is accurate and visible to Sales.

Module 07 — Workflow Automation, Task Management & Business Process Engine

The automation backbone connecting every module — configurable triggers, conditions and actions that generate tasks, reminders, approvals and notifications without manual intervention.

Key Capabilities

- Event-driven workflow engine covering customer, lead, opportunity, service, marketing and financial triggers.
- Automated task and reminder generation (follow-ups, renewals, reviews) by role.
- Multi-level approval workflows (quote, margin, credit, closure, pricing) with delegation and escalation.
- Configurable notifications via dashboard and email, with mobile push planned for a future phase.
- Automatic lifecycle transitions (e.g. Active → At-Risk → Lapsed) on inactivity thresholds.
- Post-event survey automation (delivery, complaint resolution, onboarding).

Acceptance Criteria

- Workflows, tasks and reminders are configurable by administrators without code changes.
- Lifecycle transitions and escalations occur automatically per configured rules.
- Workflow execution and failures are fully auditable and reported.

Module 08 — Reporting, Dashboards & Business Intelligence

Consolidates data from every module into role-based dashboards and a self-service reporting suite spanning operational, tactical and executive needs.

Key Capabilities

- Executive, Sales, Service, Marketing, Financial and Operational dashboards with drill-down KPIs.
- Standard report library across customers, sales, service, marketing, finance and administration.
- Custom report builder: field selection, grouping, filtering, calculated fields and scheduling.
- Interactive visualisations — charts, funnels, heat maps and geographic views.
- Scheduled report distribution (daily/weekly/monthly) via email or export.

Acceptance Criteria

- Dashboards display accurate, real-time KPIs respecting role-based security.
- Users can build, save, schedule and export custom reports.
- Standard reports are available across all functional modules.

Module 09 — System Administration, Configuration & Platform Management

Gives administrators no-code control over users, roles, custom fields, lookups, workflows and integrations, enabling the platform to evolve without development effort.

Key Capabilities

- User and role administration with granular RBAC at module, screen, field, record and action level.
- Metadata-driven custom field framework across all major entities.
- Lookup and reference data management (types, statuses, regions, vehicle/tank types, etc.).
- Workflow, approval, notification and communication-template configuration.
- Integration configuration and monitoring (connections, frequency, retries, logging).
- Comprehensive audit logging of all administrative and business changes.

Acceptance Criteria

- Users, roles, permissions, fields and lookups are configurable without software changes.
- All administrative actions are captured in the audit trail.
- Platform health, integration status and scheduled jobs are visible via admin dashboards.

Module 10 — Integration Management & External Systems

The connectivity layer linking the CRM with CODAS and other business systems, ensuring secure, reliable and auditable data exchange while CODAS remains the operational system of record.

Key Capabilities

- CODAS synchronisation of customer, financial and operational data — scheduled, near-real-time or manual.
- Secure REST APIs (authenticated, versioned, rate-limited) for customer, sales and service data.
- Email and calendar integration with automatic logging to the Customer 360 timeline.
- Document storage and association across customers, opportunities, cases and sites.
- Import/export (CSV/Excel) with validation and role-based control.
- Integration monitoring, retry logic and error/exception reporting.

Acceptance Criteria

- Customer, financial and operational data synchronise correctly and reliably with CODAS.
- API access is authenticated, versioned and audited.
- Integration failures are logged, monitored and recoverable.

6. Non-Functional Requirements

The following quality attributes and operational characteristics apply across all functional modules and will guide architecture, testing, deployment and support.

Category	Requirement
Performance	Dashboards, search and Customer 360 load in $\leq 2-3$ seconds; standard reports ≤ 10 seconds; API responses ≤ 2 seconds (95th percentile).
Availability	99.9% production availability; maintenance scheduled outside business hours.
Scalability	Modular architecture supports growth in users, customers, products, sites and integrations.
Security	Role-based access control, TLS/HTTPS encryption, secure credential storage, MFA planned as a future enhancement.
Audit & Traceability	Immutable audit log of all business and administrative actions, including before/after values.
Reliability & Data Integrity	Duplicate prevention, mandatory-field validation, referential integrity and graceful recovery from transient failures.
Usability & Accessibility	Responsive, consistent UI with keyboard navigation and screen-reader support for key workflows.
Compatibility	Current Chrome, Edge, Firefox and Safari; responsive desktop and tablet layouts.
Maintainability	Modular, configuration-first architecture, documented APIs, version control and CI/CD.
Monitoring & Logging	Centralised logging of authentication, API, workflow and integration events, with failure alerting.
Backup & Disaster Recovery	Automated backups, agreed retention policy and periodically tested restoration.
Data Retention	Configurable retention for records, communications, audit logs and attachments.
Integration	Authenticated, versioned APIs with retries, monitoring and transaction logging.
Configuration	No-code configuration of fields, workflows, roles, dashboards and templates.
Compliance	RBAC, audit logging and data-protection controls; regulatory detail (e.g. GDPR) confirmed at detailed design.

7. Technical Architecture & Solution Design

Project Martha will be implemented as a modern, cloud-native, modular CRM platform with a responsive web interface, integrated with CODAS and other enterprise systems through secure APIs and synchronisation services.

Architectural Principles

Modular architecture · API-first design · configuration over customisation · secure by design · cloud-ready · loosely coupled · highly available · fully auditable · extensible.

High-Level Architecture

Users (Sales, Customer Service, Management) → Web Browser (HTTPS) → React/Next.js UI → Backend API → Customer Database, Workflow Engine, Reporting Engine and File Storage → CODAS Integration Layer → CODAS ERP.

Proposed Technology Stack

Layer	Proposed Technology
Frontend	React / Next.js
Backend API	NestJS (.NET Core to be evaluated during design)
Database / ORM	PostgreSQL with Prisma
Authentication	Microsoft Entra ID / OAuth 2.0 (or client-approved equivalent)
File Storage	Azure Blob Storage / AWS S3
Reporting	Power BI or embedded reporting (subject to client preference)
API & Docs	RESTful APIs, OpenAPI / Swagger
DevOps	Docker, GitHub Actions / Azure DevOps, Git

Final technology selection will be confirmed during the Technical Design phase in consultation with the client.

Security & Deployment

- Authentication: secure login, configurable password policy, MFA as a future enhancement.
- Authorisation: role, field, record and administrative-level permissions.
- Encryption: HTTPS/TLS in transit, encrypted credential and secrets storage.
- Environments: Development → Test → UAT → Production, each independently configured and secured.

8. Implementation Strategy, Delivery & Migration

Project Martha will be delivered using a phased Agile methodology with formal stakeholder review and approval at each gate: Discovery → Solution Design → Development → System Integration Testing → UAT → Data Migration → Training → Production Deployment → Hypercare.

Phase	Key Activities	Deliverables
Discovery & Business Analysis	Kick-off, workshops, requirements validation, gap analysis.	Validated requirements, functional specification, project plan.
Solution Design	Architecture, database, UI/UX, integration and security design.	Solution design document, architecture diagrams, prototypes.
Development	Sprint-based build of CRM modules and integrations with regular demos.	Working software, sprint demos.
System Integration Testing	Functional, integration, security and performance testing.	Test results, defect log.
User Acceptance Testing	Business validation of processes and workflows.	UAT sign-off.
Data Migration	Cleansing, mapping, trial and final migration with reconciliation.	Migration and reconciliation reports.
Training	Role-based training for Sales, Service, Marketing, Finance, Ops and Admin.	User guides, training materials.

Production Deployment	Environment validation, final configuration, go-live verification.	Production sign-off.
Hypercare	Post-go-live issue resolution, monitoring and optimisation.	Hypercare exit report.

Testing Strategy

Testing spans functional coverage (customer, sales, marketing, service, reporting, workflow, administration), technical coverage (integration, API, security, performance, regression) and business coverage (UAT and end-to-end scenario validation).

Change Control

Any change to approved scope follows a formal Change Request process: submission, business and technical impact assessment, cost and schedule estimation, client review, and written approval before implementation.

9. Assumptions, Dependencies, Constraints & Exclusions

Key Assumptions

- Business stakeholders and nominated Product Owners are available throughout the project for workshops, reviews and UAT.
- The approved functional specification represents the agreed implementation scope.
- Suitable integration interfaces are available for CODAS, and required environments are provisioned before testing.
- Corporate authentication services are available if Single Sign-On is implemented.
- Source data is available in a format suitable for migration, with data quality and ownership remaining the client's responsibility.

Key Dependencies

- Timely stakeholder availability, review and approval of deliverables.
- CODAS integration interfaces, infrastructure provisioning and authentication services.
- Third-party providers for email, cloud infrastructure, DNS/SSL and security approvals.

Constraints

- Development is limited to the functionality defined in this SOW; new requirements are managed through change control.
- Delivery timelines depend on timely client feedback and approvals.
- Integration testing depends on the availability of external systems.

Out of Scope

- Native mobile apps, self-service portals, e-commerce, field service and fleet management (future phases).
- IoT device integration and AI features beyond those explicitly approved.
- Replacement of CODAS, custom hardware integration and third-party licensing costs.
- Cleansing of historical data, reconstruction of missing information, and migration of unsupported formats (unless separately agreed).
- Ongoing managed support, infrastructure/database administration, 24x7 monitoring and end-user helpdesk (unless contracted separately).

Responsibilities

Client	Supplier
Provide business stakeholders, system access and documentation; support migration; participate in workshops and testing; review and approve milestones.	Deliver the agreed CRM solution; provide technical expertise and project management; conduct testing and support UAT; deliver documentation and Hypercare support.

Project Success Criteria

- All agreed modules delivered and CODAS integration operational.
- UAT successfully completed and production deployment achieved.
- Users trained and outstanding issues within agreed tolerance.
- Project documentation delivered and accepted.
